FOR IMMEDIATE RELEASE

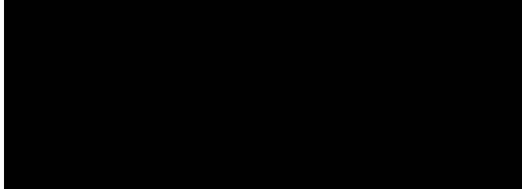

**“Infotegrity and CSEA extend strategic partnership supporting Oracle’s E-Business Suite, Oracle Database and other integrated systems.”**

Infotegrity, LLC, announced signing a long term business partnership with CSEA, Civil Service Employees Association, in Albany, New York. CSEA originally engaged Infotegrity in 2002 to help implement Oracle E-Business Suite, and following implementation retained Infotegrity for ongoing functional and technical support. The new accord extends Infotegrity’s and CSEA’s strategic business partnership for several more years, and includes additional Oracle E-Business Suite application modules, Oracle Databases and other integrated systems.

The new agreement enables CSEA to focus full attention and assets on their core business: member service and support and organization management. CSEA will look to Infotegrity to help deliver remote and on-site support via Infotegrity’s collaborative service solution: Infotegrity/Assist. CSEA previously selected Infotegrity and relied on Infotegrity’s/Rapid best practice methodology for an on-time, on-budget solution delivery. CSEA also utilized Infotegrity’s/Ascend upgrade approach for advancing mission critical Oracle Databases and application releases in 2005.

Infotegrity Managing Partner, Scott Thon, cited “Infotegrity’s best practices, skilled professionals and a commitment to teamwork and client satisfaction as contributing factors in CSEA’s initial implementation success. The same success formula applies for ongoing managed service support, via Infotegrity/Assist, which has led to this long term, expanded agreement”. Infotegrity first helped CSEA migrate from a legacy Ross financial system to the Oracle E-Business Suite, and delivered integrated financial modules and reporting as well as enhanced business processes and policies – all on-time and on-budget – in 2002. Thon added, “Infotegrity’s professional staff and collaborative service and support solutions like Infotegrity Assist, Ascend and Rapid continue to deliver accelerated ROI solutions that clients like CSEA require to progress strategic business, technology and operations initiatives”.

CSEA Director of Internal Operations, Dave Stack, recognized CSEA’s need to enhance financial and administrative support as well as operational efficiency by implementing Oracle’s E-Business Suite. Stack said “Oracle’s integrated application platform, Release 11i, is strategic to CSEA’s continuous improvement, ongoing success and future expansion as the leading labor union in New York State. Stack also noted that “while our initial goals were challenging, Infotegrity delivered as promised and continues to do so providing us with strategic support services that compliment CSEA’s membership, staff and mission”.
